

Eyeball Optics!

On blank paper, make this...

The distance between the shapes should be close to the distance between your eyes

Make a Microscope

Set up your pencils and bag.
Add a drop of water

Make a Microscope

- The water acts as a magnifying lens!
- Lenses don't need to be hard.
- The lens in your eye is squishy!
- Muscles pull or squish it to change the focal length (to focus)
