

## Sample Kite- Design 2

---

### Materials

- A piece of paper
- A piece of string, about 2 to 4 metres long
- Tape
- Skewer
- Optional: Ribbon, about 1 metre

### Steps

1. Fold paper in half (bring short sides together)
2. Mark the top edge of the paper about 3 cm from the fold
3. Mark the bottom edge of the paper about 3 cm from the open side
4. Fold the paper along the line connecting the two marks you made
5. Repeat steps 2 – 4 on the reverse side of the paper
6. Unfold one “wing” so you can tape the middle seam
7. Take a skewer across the widest part of the wings. You will have to cut the skewer to the correct length.
8. Make a hole on the spine under the kite’s wings, about 1/3 the way down.
  - Reinforce the area where you make the hole with tape. Then use hole punch or skewer to make hole.
  - Attach string through the hole.
9. Tape ribbon to the tail end of the kite.
10. Go fly a kite!
